

INSENSIV

BETTER_TO_KNOW

Bottom_Scan

The **Bottom_Scan** is a sorting system for in-spray related defects installed at the sorting line. By detecting the ink dot or ink jet marking on the bottom of the can it can sort out defects caused thru the in-spray systems. Known defective marking types (e.g. color; numbers) can be selected and rejected. This will reduce costs as well as the necessary capacities during post-inspection of HFI pallets.

- **Automatic sorting of selected ink dot or ink jet markings**
- **Detection of UV-markings optional**
- **Considerable saving in cost and time**
- **Highest reliability**
- **Flexible and easy setup**
- **Statistic functions**
- **Easy integration**
