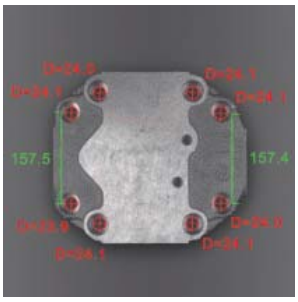
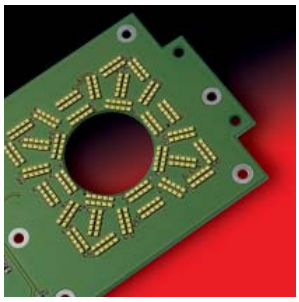
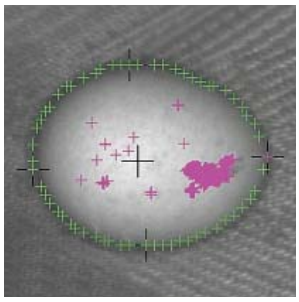
Supervision and controlling systems







The areas of application of image processing systems for supervision and control are boundless. Starting from the work piece measurement in industrial application up to rating of fast moving objects in the agricultural area INSENSIV has realised numerous projects.

In industrial agricultural applications INSENSIV has developed, for example, a counting and rating system of chicken eggs. Although no egg resembles the other, the product permits an on-line measurement as well as the qualitative regulation of damages and soiling.

INSENSIV has developed a special lighting concept for the analysis of the quality of corn in harvesters. On this occasion, very intensive short light pulses of less than 50 microseconds are implemented.

Furthermore INSENSIV compiled outside applications with which the influence of the sunlight is reduced to an absolute minimum to achieve consistent results. Moreover an especially developed LED lighting in the infrared range is used.
